Overall quality of presentation is excellent.

The videography is superior. It almost looks professional and green-screened. The audio is the only detriment. The microphone was a little too far away. But I really appreciate the effort put in to create a quality video.

Really like the incorporation of the demo into the slides. You really put thought into the presentation and it showed.

While it was good to list the design patterns used, what would have been even better is to list what the patterns used for. Some of the claims weren't substantiated. For example, the presentation claimed the SOLID principles were followed. But, how do we know the solid principles were followed? The tie back to the class was very effective.

Demo would be better if it looked more like the presentation. Also, you could have made the display font bigger to make it easier to follow.

Like the hiding of special tags during demo. Actually, because of the project presentation, one doesn't need to watch the system demo. The system demo wasn't as effective as the project presentation. The set up video was fine.
